(54) Title: SAFETY BUTTON

(57) Abstract: Element (1) for opening and/or closing doors, gates or windows, comprising a first part (2) designed to operate a closing mechanism by rotation, a second rotary part (3) designed to transfer a rotary motion to the first part (2), the rotary knob (1) being provided with one or several push buttons (4), so that when at least one push button(4) is pushed, the rotary motion of the second part (3) is transferred to the first part (2). With this element (1), two operations have to be performed, namely pushing a push button and performing a rotary motion of the element (1) in order to open a door and suchlike, because of which it will become practically impossible for children to open a door by accident.
